

DBUS ENERGY POLICY

COMPAÑÍA DEL TRANVÍA DE SAN SEBASTIÁN-Dbus considers energy saving and environmental improvement to be fundamental, and works towards achieving these objectives by continuously renewing its vehicle fleet, making an effort to incorporate the best available technologies into its services, participating in numerous local and international projects aimed at creating more sustainable transport systems, and striving to keep its fleet and equipment in perfect condition.

By implementing this policy, Senior Management undertakes to establish and maintain an energy management system that complies with all the requirements of ISO 50001.

In accordance with this policy, Senior Management guarantees that the types and quantities of energy used and consumed are appropriate and necessary for its activities and services.

Senior Management undertakes to:

- Actively promote the integration of energy efficiency as a cross-cutting principle across all functional areas, ensuring the genuine engagement of every department in achieving shared sustainability and efficiency objectives.
- Promote an organisational culture that prioritises energy efficiency, sustainable mobility, and decarbonisation, supporting ongoing training and the active role of staff in improving the organisation's energy performance.
- Establish interdepartmental energy coordination mechanisms that enable joint monitoring, coherent decision-making, and the optimisation of synergies in relation to Dbus's energy transition.
- Promote technological innovation and digitalisation as drivers of improved energy performance, enabling predictive analysis, intelligent operational management, and the optimisation of resources.
- Communicate progress in energy efficiency and decarbonisation clearly and on a regular basis, promoting transparency and accountability both internally and externally.

- Continually improve the Energy Management System and its processes, including the design and appropriate specification of its activities, infrastructure, and resources and inputs in general.
- Acquire and incorporate products and services that are optimal for this policy, and use similarly appropriate suppliers.
- Facilitate and streamline the availability of information and resources wherever possible and necessary.

The company undertakes to comply with all legal and other requirements regarding energy use, consumption, efficiency, and performance.

All of the above, while at the same time fulfilling our mission to provide public transport services to the city's passengers, through a continuous effort to be a benchmark in the sector and to offer a competitive service, with the fundamental objective of fully meeting the mobility needs of our current and potential users by delivering high-quality service and practical information at competitive cost, and contributing to the sustainability of our environment.

The application of this energy policy is continuously supervised and reviewed at least once a year by Senior Management, as necessary for the effectiveness of the Energy Management System and its objectives.

San Sebastian, 09 May 2025

Igor Gonzalez, Managing Director of Dbus
